Adithi Madduluri

adithim003@gmail.com • +1 (571) 576-4170 • LinkedIn • GitHub

Skills

Software Tools: JIRA, FIGMA, Power BI, Azure Data Factory (Pipelines, Datasets, Dataflow, PowerQuery), Git/GitHub, HubSpot, Excel
Programming: Python, SQL,R, JavaScript, HTML5, CSS,Java,C
Frameworks/Libraries/Other: React JS, NodeJS, Flask, Beautifulsoup, Numpy, Pandas, Matplotlib, Scikit-Learn, Seaborn, Tensorflow, Keras, Pytorch, OpenCV, SQL Server, MySQL, MongoDB

Experience

Darwinbox Hyderabad, India
Business Analyst Intern Jan 2024 – July 2024

- Optimized the Account Intelligence process by developing a custom LinkedIn scraper using API to extract company and individual profile data at a rate of 500 accounts per 30 minutes.
- Designed and implemented automated workflows in the CRM system, enhancing business process efficiency, streamlining task management, and driving operational improvements.
- Analyzed customer data across five distinct regions to identify ideal customer profiles, establishing a comprehensive set of dashboards that improved lead-to-customer conversion rates by 25% over six months.

Gagellan Global Solutions Pvt Ltd Hyderabad, India
Data Analyst Intern Aug 2023 – Sept 2023

- Successfully optimized loan eligibility due diligence processes, leveraging cutting-edge LSTM and time series algorithms, resulting in an impressive 93% efficiency within the transformative SMART Incentives project.
- Orchestrated seamless ETL operations using Azure Data Factory, optimizing data processing and ensuring scalability.
- Leveraged SQL Server and Azure integration for real-time data retrieval, and utilized Power BI to create visually compelling dashboards for historical analysis and predictive insights.

Education

University of Massachusetts Dartmouth Dartmouth, MA
Master's in Data Science Sept 2024 - Present
GPA:3.9

Chaitanya Bharathi Institute of Technology Hyderabad, India
B.E. Artificial Intelligence and Data Science Dec 2020 - July 2024
GPA: 9.00

Academic Projects

Stock Market Analysis

- Developed and implemented the Prophet model to analyze stock market data, achieving a forecasting accuracy of 95%, which enabled traders to make informed decisions based on reliable temporal patterns.
- Conducted in-depth analysis of market trends and stock performance using historical and forecast data, delivering actionable insights to inform and optimize trading strategies.

Asteroid Analysis

- Achieved 96.71% accuracy in classifying hazardous asteroids using a Random Forest Classifier, optimizing model performance through feature selection and parameter tuning.
- Identified anomalies in asteroid properties with 92% accuracy using the Isolation Forest model, specifically between eccentricity vs. semi-major axis and miss distance vs. minimum orbital intersection.
- Predicted asteroid diameters with a Gradient Boosting Model, achieving an accuracy of 94.869%.

Understanding the Regional Differences in World Happiness Index

- Led research and analysis of the World Happiness Index (2015–2022) using machine learning models, including Decision Tree Regression, Multiple Linear Regression, and Support Vector Regression, to uncover key factors influencing global happiness trends.
- Analyzed the impact of government policies on happiness scores to highlight key drivers of societal well-being, demonstrating expertise in statistical computing and data visualization using R.
- Enhanced understanding of factors driving happiness scores by applying the K-Nearest Neighbors (KNN) model to identify patterns and relationships within the data.

Research Work

Early Prediction Of Vector Borne Diseases Using Deep Learning And Machine Learning Techniques *(ICACI)* Dec 2023
Survey on Plant Disease Detection using ML and DL Techniques *(ICRAECA)* July 2023
Distributed Cloud Storage using Blockchain and Cryptographic Algorithms *(ICACIE)* Dec 2022

Certifications

Getting Started with Data Analytics in AWS 2023
Microsoft Azure AI Fundamentals 2022
